1. Introduction

Orthographical techniques to render Sinitic texts into Japanese pre-11th century c.e.

1. Morphosyntactic glossing
2. Phonological glossing
3. Unmarked (render into Japanese without the aid of glosses)

2. Research Question

What is the distribution of glossing methods on sentence-final predicates throughout glossed renditions of Sinitic Buddhist texts?

3. Methodology

Source: ca. 9th century glossed *Immeasurable Meanings Sutra* (無量義經 *Muryōgikyō*), found in Kabutogi & Nakada 1979

Code all sentence-final predicates for number of (1) Morphosyntactic glosses, (2) Phonological glosses, (3) Unglossed morphemes predicted (due to context)

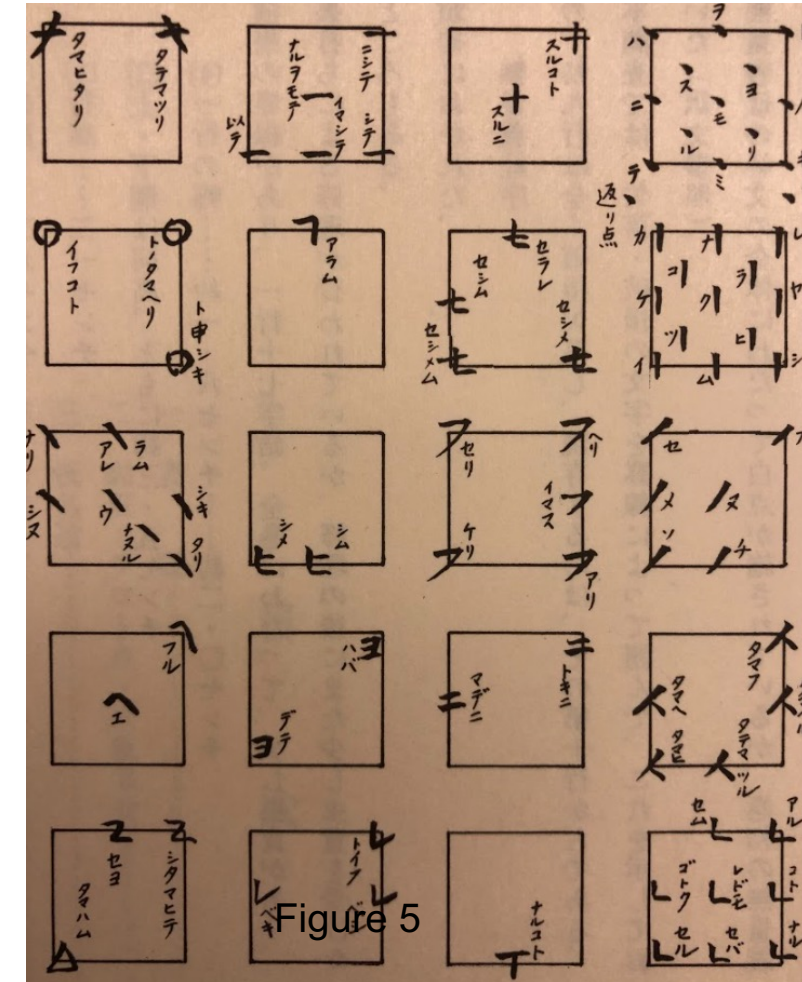

4. Examples

Example 1

Immeasurable Meanings Sutra line 55 (Kabutogi & Nakada 1979: 20)
菩薩摩訶薩ありキ。
bosatu makasatu ariki
bodhisattva mahāsattva be-PAST

Example 5

5. Findings

Out of 574 total sentence-final predicates, 448 (78%) glossed

1. Morphosyntactic glossing: 440 total (77%)
2. Phonological glossing: 16 total (3%)
3. Unglossed morphemes assumed: 101 (17%)
4. Unglossed, no morphemes assumed: 54 (9%)

Combination of glossing techniques in a s-f predicate:

- 1&2: 8 total (1.4%)
- 1&3: 27 total (4.7%)
- 2&3: 1 only (>.2%)

6. Conclusions

• Due to the nature of lecture note-taking, speed was imperative

• Phonological glosses only used for A) predicates that contained elements morphosyntactic glosses were unable to capture due to overlap and B) when there were less common morphemes that were not part of the morphosyntactic glossing system

• Predicates left unglossed when A) lacking complex morphology or B) repeating morphosyntactic structures
